

Minimally Invasive Surgery (MIS)

OR Setup

Left Foot, Right-Handed Surgeon

With this setup, a right-handed surgeon will reach across the leg to access the medial side of the operative leg.

The mini-c arm will be brought in from the side opposite the surgeon.

Left Foot, Left-Handed Surgeon

Left-handed surgeons are positioned at the end of the bed between the back table and mini-c arm to easily access the medial side of the operative leg.

In both setups, the mirror image is used in the case of a right foot operation.

This description of technique is provided as an educational tool and clinical aid to assist properly licensed medical professionals in the usage of specific Arthrex products. As part of this professional usage, the medical professional must use their professional judgment in making any final determinations in product usage and technique. In doing so, the medical professional should rely on their own training and experience and should conduct a thorough review of pertinent medical literature and the product's directions for use. Postoperative management is patient-specific and dependent on the treating professional's assessment. Individual results will vary and not all patients will experience the same postoperative activity level or outcomes.
